Safety depends on Smart Decisions

# Comprehensive Product Safety with Track & Trace

## Complete Traceability Product Safety for Maximum Patient Safety

Pexcite is an open software platform for production processes in the pharmaceutical and biotech industry, which can be expanded quickly and easily with a variety of solutions without having to re-validate the entire system. As a smart platform for data-driven decisions, Pexcite offers Track & Trace, a comprehensive solution for product traceability. The future-proof system meets global pharmaceutical regulations for clear labeling and identification of the products along the entire supply chain, right up to the patient.

Gather and analyze valuable data as a basis for smart decisions to ensure the required integrity of your products and thus patient safety.

Everything at a glance

### Your Advantages with Track & Trace

#### Maximum Pharmaceutical Safety

Thanks to Uhlmann Pac-Systems' experience, Pexcite meets all the requirements of the pharmaceutical industry. Enjoy a comprehensive solution consisting of advice and service, machines and components as well as modern software.

#### Regulatory & Compliance

The solution is always based on the latest legal requirements of the respective country and is compliant with all rules and regulations.

#### Validated for the Pharmaceutical Industry

Standardized and validated system to safely and quickly implement and update currently valid Track & Trace regulations, which thus serve pharmaceutical safety.

#### Traceability along the Value Chain

Track & Trace enables you to seamlessly trace sensitive products along the entire value chain. Both manual and automatic processes are transparent for the user at all times thanks to graphic monitoring aids.

#### One Modular System

Manage and analyze comprehensive serialization and aggregation data that serve as the basis for future-oriented, secure production.

#### GS1 Solution Partner

As a GS1 solution partner, we work closely with solution partners that support Track & Trace worldwide. The GS1 database covers all globally applicable tracking and tracing laws and regulations for pharmaceutical products and medical devices.

## One Modular System Functionality

### Serialization

With Track & Trace, Pexcite offers the clear labeling and traceability of sensitive products, compliant with all worldwide T&T regulations.

### Aggregation

The development of a parent-child relationship during aggregation and a continuous connection across all software levels up to superordinate systems not only enable traceability, but also increase efficiency, process reliability and quality optimization.

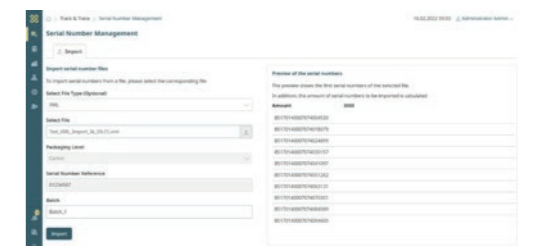

### Rework

Pexcite offers streamlined and user-friendly rework across all pack levels. Rework is easy and process-reliable thanks to intuitive, graphic operator guidance.

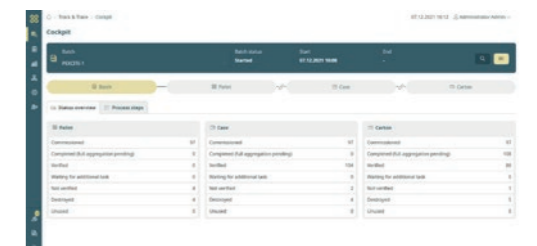

### Serial Number Management

Serial numbers can either be imported from external sources or provided with your own serial numbers from Pexcite for further use in MES or ERP systems. In addition, Track & Trace reports can be created to meet legal requirements.

### Track & Trace-Cockpit

The Track & Trace Cockpit shows detailed information about the serial numbers used, including the process steps and the existing aggregation between the individual packaging levels.

 We connect. You control.
