

## Digital Tool Management

## **Simple Reduction of Format Complexity**

When format parts have to be exchanged for a product change, precise decisions at the right time are the key to process reliability. Pexcite Tool Management provides a holistic, digital overview of the setup process with intuitive user guidance in order to reduce format complexity. At the same time, the OEE is increased, while a high, pharma-compliant quality can be ensured, which is verifiably documented for analyses, audits and customers.

Reduce manual format complexity and increase the productivity of your system through digital and scalable planning of your format parts.

#### Everything at a glance

### **Your Advantages with Tool Management**

#### **Holistic Set-up Process**

The solution enables holistic, digital planning, management and documentation of the setup process with verification of the format parts provided – for maximum security.

#### **Reduction of Format Complexity**

Tool Management reduces format complexity and ensures error-free plannability of your format tools through configurable object dependencies. Easy to retrofit for existing lines.

#### **Pharma-compliant Quality Assurance**

Specifically tailored to the needs of the pharmaceutical industry, the software complies with all pharmaceutical regulations and enables precise quality management, compliant with GMP, 21 CFR Part 11.

#### **Easy User Guidance**

With an intuitive, process-oriented user guide, the operator is guided through the process in a practice-oriented manner to immediately find one's way around in each individual sub-process.

#### **Scalable Data through Connectivity**

The open, modular Pexcite platform offers scalable connectivity with other solutions for data-driven decisions. Tool Management also works with manufacturer-independent tools and format parts.

#### **Digital Process Documentation**

Thanks to the digital solution, documented quality certificates are available at all times for analyses, audits and your customers.

## Management and Documentation of the Setup Process **Functionality**

#### **Database & Configuration**

Pexcite Tool Management enables digital mapping of production and machine, which can be used to make different configurations based on the database. This includes the configuration of a logistics access point as well as quality tasks and life cycle.

#### **Planning**

The comprehensive Pexcite Batch Control Center combines both batch and setup orders with intuitive user guidance. The availability of tools as well as an alternative selection of qualified format tools are clearly displayed in order to create a scalable full or partial format set planning.

#### **Manufacturing & Logistics**

In order to increase the efficiency of warehouse logistics, clear deployment reports are available in Tool Management. The configuration and tracking of logistics processes are also supported by the optional integration of storage systems and an individually configurable setup assistant.

#### **GMP Process- & Quality Management**

For quality assurance, the service management is time and numerically scalable and automated by a life cycle counter with a check-out function. Work and test instructions as well as protocolling of quality measures can be managed directly as well as viewed and compared with the service quality calendar.

#### **Security & Documentation**

To ensure security, the solution offers data matrix code verification and digital signatures for relevant process steps. Active user management allows user access to be clearly assigned and documented. Connectivity to other Pexcite solutions is pharma compliant according to 21 Part II.
